Hygrozyme

ENZYMATIC FORMULA FOR THE PREVENTION OF ROOT ROT

Accelerating root zones and unlocking essential nutrients for your plants since 2004.

What is Hygrozyme®?

A powerful blend of concentrated, beneficial enzymes specifically formulated to prevent root rot by accelerating the breakdown of dead root matter—unlocking essential nutrients for your plants.

All ingredients in Hygrozyme® are natural and formulated to work within the optimal temperature and pH range of your crop.

Active Ingredients:

Cellulase 1,000 U/mL

Xylanase 100 U/mL

Hemicellulase 75 U/mL

Beta-Glucanase 40 U/mL

For usage specifications, visit our [Feed Calculator](#) page.

Also available in a concentrated formula.

Benefits:

- Effective in all growing media & growth stages
- Compatible with all nutrients & supplement programs
- Supports & boosts beneficial microbes
- Accelerates the breakdown of dead roots
- Works as a compost tea booster
- Allows more nutrient uptake

Why should I choose Hygrozyme®?

“Wow, just wow! I run DWC, and the roots were giving me issues. The product you sent changed everything. I’m definitely buying it. It’s a game changer.”—Joe

Hygrozyme® meets all registration requirements for sales and use and—to ensure satisfaction and 100% guaranteed results—is manufactured in an ISO 9001-certified production facility. (Highest quality and consistency in every bottle!)

HYGROZYME FEED CALCULATOR

About

- Usage: 8-10mL/Gallon (2-2.5mL/L)
- Effective in all growing media and growth stages
- Compatible with all nutrient and supplement programs

Application Instructions

Propagation Preparation: Mix 1.5 mL per L of water (0.20 oz per gallon). Soak trays and media before use. Proceed with a regular regimen.

Hydroponics & Soil Media: Recommended to be used with every watering or as determined by your feeding schedule. Mix 2-2.5 mL per L (0.27-0.34 oz per gallon) of water or nutrients. Never exceed 4 mL per L (0.5 oz per gallon).
